  QP COMPANY   *7/2020 - 5/2022*

  I have experience as Front End Developer I have delivered a lot of Web pages

PROJECTS

- ## Portfolio

  It is a personal website that allows users to create an account and log in. They can add projects and services, upload images of their completed work—such as websites or services they offer—and include descriptions. Clients can browse these services and, if interested, contact the user by sending a message via email.

  - Built with **HTML5, CSS3, JavaScript ,PHP, MySQL**
  - GitHub Link Project : https://github.com/MohamedIbrahimAbdulghani/portfolio_avatar

- ## Invoice-System

  The invoicing software is a system that allows users to record their invoices and access them at any time. It enables them to track payment statuses—whether fully paid, partially paid, or unpaid. Users can also generate comprehensive reports that include all transactions related to the invoices, such as recording partial payments or adding attachments like images.
  Additionally, the software supports managing categories and products, creating invoices for them, and automatically registering them in the system. Users can also export invoices to an Excel sheet and receive email notifications for any transactions performed within the system.
